

Airen RPM Clever

Airen RPM Clever manually or automatically adjust the fan speed from full to low. The installation and using of the device is very easy and especially for high RPM fans it is very helpful device. It converts 3 pin connector to 4pin PWM function connector on the mainboard. The thermal sensor also stops the fan automatically if the measured temperature is below 20°C and thus reduces useless noise.

Technical specification

Dimension	57 × 22 × 20 mm
Weight	10 g
Input Voltage	12V ± 10%
Output Voltage	4.8-12V ± 10%
Optimal Wattage	12W
Color	Black-red
Package	Hanging blister
